

Product Highlights

- Design Dashboards with no programming (just drag-and-drop)
- Developed on the latest .Net technology, proven and scalable architecture
- Provides end user the power to interact and analyze data
- Customizable gauges, controls and all chart types
- Multiple metrics in one screen, drillable maps, annotations and more
- Seamless integration to Web Reports
- Color coding to highlight exceptions
- Highly personalized content and display
- Collaborative capabilities like annotation, email
- Prebuilt templates with freestyle design options
- Export features to Words, Power Point, Excel etc.
- User access security features for Dashboard modules

Overview

BI Tools is an integrated product within the Peforma BI Suite that provides complete Dashboard Designer Tools on a proven platform, and with Patent Pending technologies.

It is the most advanced and innovative dashboard design tools with capabilities such as drag-n-drop, graphical charts, maps, gauges, alert buttons, commentary box and collaborative functions. It provides guided, step-by-step guidelines that enable non-technical personnel to create and customize sophisticated, intuitive and interactive dashboards, comprising of Key Performance Indicators (KPI's) with Business Rules and alerts etc. without any programming at all.

- Create Advanced Visualizations and Dashboards
- Key Performance Indicators (KPI)
- Corporate Performance Management (CPM)
- Seamless Integration to Web Reports

BI Tools is an ideal solution for 'Meetings of the Future' where customized dashboards will be used as a tool that provides knowledge workers the ability to detect trends, analyze abnormalities, and make decisions in an collaborative manner. 'Meetings of the Future' will be short and sharp with the main focus on making decisions and taking actions to drive and improve 'Key Performance Indicators'. These meeting will be conducted in a rich user experience environment, supported by applications like DataMicron's BI Tools.

*** With innovative and easy to use interface, DataMicron BI Tools provides users and management at-a-glance information about strategic and tactical performance across the entire organization.*

Performa- BI Tools

Features & Benefits

1. Easy to Deploy and Maintain

BI Tools is the easiest, fully functional out of the box dashboard tool to deploy, implement and manage due to its ability to leverage on existing platforms/data sources, easy integration and scalability. It provides for easy installation, configuration and maintenance, saving the time and effort of custom coding by IT.

2. Scalable Architecture

With proven scalable technology, BI Tools enables the user to monitor and manage complex sets of data in an easy to understand format graphically and expose data relationships faster than ever before. Unique Data Visualization capabilities help decision makers to gain understanding and take proactive actions quicker.

3. Build Dashboards within minutes (No programming required!)

BI Tools enables the user to easily design their own Dashboards and high impact visualizations without any programming and within a few minutes. It is highly customizable right down to buttons, labels, charts, gauges, maps, commentary box and many more. This saves time and IT resources in custom coding.

Its intuitive and easy to use Designer Interface – with drag-and drop design features makes user training a breeze.

4. Fast End-User Adoption

BI Tools' user friendly interface enables the user to intuitively navigate, perform drill downs and investigate underlying root causes of problems or issues. Business users require little to no training, and this ensures fast end-user adoption.

BI Tools' innovative interface and layout facilitates rapid comprehension of key objectives. Its key performance indicators include crisp, clear interactive graphs, annotations and gauges that provide easy visualizations of organizational performance.

5. Rich User Experience (AJAX Technology)

BI Tools presents a real and interactive world view of business which is dynamic, ever changing and evolving – one that static reports cannot offer. Its innovative feature includes drillable maps, "Interactive Charts", annotations, customizable speedometer - this allows for full and rich user experience. Instant high impact visuals with color coding lets users bring data to life in virtually any business environment.

Performa- BI Tools

6. Seamless Integration to Web-Reports

BI Tools is tightly integrated to BI Reports. Users can monitor high level metrics in the dashboard and easily navigate to the details provided in Web-Report.

7. Innovative Corporate Performance Management (CPM)

BI Tools offers a complete and comprehensive Corporate Performance Management (CPM) System. It provides one version of truth – connects goals to reality, objectives with initiatives, thus enabling the organization to remain focus in driving and improving its performance.

8. Optimize network efficiency

BI Tools processes and summarizes data in the application layer and only returns results at a summary level, thus enabling processing efficiency and the conservation of bandwidth.

9. Minimal IT involvement

BI Tools helps to reduce the burden on IT and improves the productivity of the IT department. Users are able to create their own business Dashboards and unique Visualization modules, perform analysis and set alerts for the complete CPM requirements. This frees up the IT resources to focus on other areas.

10. Best ROI (Return On Investment)

With its complete offerings for Dashboard and CPM requirements, BI Tools offers the best ROI (Return On Investment) and 'best value for money' in the market.
